^{**} County Rank Order: Counties were rank ordered first by increasing age-adjusted death rate (calculated to 15 decimal places), second by decreasing size of the population.

N/E: National Objective for the Year 2010 has not been established.

N/A1: National Objective is based on both underlying and contributing cause of death which requires use of multiple cause of death files. A comparison was not made because these files are not yet available in California for this time period

Note: Crude death rates, crude case rates, and age-adjusted death rates are per 100,000 population. Birth cohort infant death rates are per 1,000 live births.
